SELF-STANDING
AUTO UNLOADING
OPTIONAL

The rotary, thermo-sealing machine is ideal for low to high volume production.

The teflon-coated sealing head is regulated by a **digital temperature control**.

Blister and cards are fed and unloaded manually. However, as optional features, the machine can be equipped with self-standing **automatic card feeding** and **automatic unloading** of finished products.

Machine is equipped with **CAM** index drive system with speed control.

All motions and functions are coordinated using operator interface. Counter is provided and can be reset for each production run. All functions for set-up purposes can be independently activated.

The set-up of the machine is simply a question of minutes, and change-over of card magazine and jigs is quick and easy.

Structure: Heavy gauge welded steel.
